Patent No. 6159697

GENERAL INFORMATION:
APPLICANT: Breat P. Monia
APPLICANT: Lex M. Cowsert
TITLE OF INVENTION: ANTISENSE MODULATION OF SMAD7 EXPRESSION
FILE REPERENCE: RTS-0133
CURRENT APPLICATION NUMBER: US/09/487,444

CURRENT FILING DATE: 2000-01-19
NUMBER OF SEQ ID NOS: 49
SEQ ID NO 11
LENGTH: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 18;

VESUL: Application US/09266294

Sequence 11, Application US/09266294

Patent No. 6171806

GENERAL INFORMATION:

APPLICANT: Coulie, Pierre; Boon-Falleur, Thierry

TITLE OF INVENTION: Isolated No. 6171806a- and Decapeptides Which

TITLE OF INVENTION: Bind to HLA-B44 Molecules And The Use Thereof

NUMBER OF SEQUENCES: 27

CORRESPONDENCE ADDRESS:

CARRESPONDENCE ADDRESS:

STREET: 805 Third Avenue

CITY: New York City

STATE: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 0.8%; Score 12.8; DB 1; Length 18; Best Local Similarity 87.5%; Pred. Sequence 4, Application US/09516911

Sequence 4, Application US/09516911

Patent No. 6489105

GENERAL INFORMATION:

APPLICANT: McGill University

APPLICANT: International Center for Genetic Engineering and

APPLICANT: International Center for Genetic Engineering and

APPLICANT: BIOTECHNION (ICGEB)

APPLICANT: BANKS, Lawrence

APPLICANT: OF INVENTION: SCREENING METHOD FOR DETERMINING

TITLE OF INVENTION: SCREENING METHOD FOR DEVELOPING DISEASES ASSOCIATED WITH

TITLE OF INVENTION: SCREENING METHOD FOR MILDITYPE D53

CURRENT APPLICATION NUMBER: US/09/516, 911

CURRENT PILLING DATE: 2000-03-01

ERABLIER FILING DATE: 2000-03-01

ERABLIER FILING DATE: 2000-03-02

NUMBER OF SEQ ID NOS: 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 372
US-03-633-659-15
US-09-633-659-15
Sequence 15. Application US/09633659
Parent No. 6395492
GENERAL INFORMATION:
APPLICANT: Mancharan, Muthiah
APPLICANT: Bennet, Clarence Frank
TITLE OF INVENTION: Derivatized Oligonucleotides Having Improved Uptake And
TITLE OF INVENTION: Other Properties
FILE REFERENCE: ISIS410
CURRENT APPLICATION NUMBER: US/09/633,659
CURRENT PILING DATE: 200-08-07
PRIOR PAPLICATION NUMBER: 08/211,882
PRIOR FILING DATE: 1994-04-22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Patent No. 6657156
GENERAL INFORMATION:
APPLICANT: Achter, Saghir
APPLICANT: Fell, Patricia
APPLICANT: McSwiggen, James
TITLE OF INVENTION: BUZYMATIC NUCLEIC ACID TREATMENT
TITLE OF INVENTION: OF DISEASES OR CONDITIONS RELATED
TITLE OF INVENTION: TO LEVELS OF EPIDERMAL GROWTH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      76 CGCACACACCCGCCGCGCGCACTCGCGCCCGG 107

| Patent No. 5877021
| GENERAL INFORMATION:
| APPLICANT: Stinchcomb, Daniel T. APPLICANT: Jarvis, Thale
| APPLICANT: McSwiggen, James TITLE OF INVENTION: METHOD AND REAGENT FOR THE TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES NUMBER OF SEQUENCES: 2751
| CORRESPONDENCE ADDRESS:
  MEDIUM TYPE: 3.5 DISCLOLLY,
MEDIUM TYPE: Storage
COMPUTER: IBM COMPATIBLE
COMPUTER: IBM COMPATIBLE
COMPUTER: IBM COMPATIBLE
COMPUTER: TESTSEQ VEFION 1.5
CURRENT APPLICATION NUMBER: US/08/151,477A
PTILING DATE: No. 5830644ember 12, 1993
PRIOR APPLICATION NUMBER: 08/038,766
FILING DATE: March 24, 1993
ATTORNEY/AGENT INFORMATION:
NAME: Warburg, Richard
REGISTRATION NUMBER: 32,327
REFERENCE/DOCKET NUMBER: 32,327
REMEMATION FOR SEO ID NO: 52:
SEQUENCE CHARACTERISTICS:
LENGTH: 15 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ZIP: 90071
COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5" Diskette, 1.44 Mb
MEDIUM TYPE: storage
COMPUTER: iBM Compatible
OOMPUTER: IBM F.C. DOS 5.0
SOFTWARE: FASTENI 1.5
CURRENT APPLICATION DATA:
APPLICATION NUMBER: 02/096, 581
FILING DATE: January 16, 1996
PRIOR APPLICATION DATA:
FILING DATE: July 7, 1995
ATTORNEY/AGENT INFORMATION:
NAME: Warburg, Richard

                                                                                                                                                                             COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC Compatible

SEGTWARE: PatentIn Release #1.0, Version #1.25

SOFTWARE: PatentIn Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/07/789,738

FLINO DATE: 19920330

CLASSIPICATION: 435

ATTORNEY/AGBNT INFORMATION:

REGISTRATION NUMBER: 30.914

REPERRENCE/POCKET NUMBER: 38-21(10540)A

TELEPHONE: (314)537-609

TELEPHONE: (314)537-609

TELEPHONE: (314)537-609

TELEPHONE: (314)537-6047

INFORMATION FOR SEQ ID NO: 1:

SEQUENCE CHARACTERISTICS:

LENGTH: 16 base pairs

TYPE: NUCLEIC ACID

TYPE: NUCLEIC ACID

TOPPING: 11-25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 12.4; DB 1;

US-08-476-021A-27/C

Sequence 27, Application US/08476021A

Patent No. 5858785

GENERAL INFORMATION:

APPLICANT: Hampel Arnold E.

APPLICANT: Titz, Richard H.

TITLE OF INVENTION: RNA CATALYST FOR CLEAVING SPECIFIC RNA SEQUENCES

NUMBER OF SEQUENCES: 9

CORRESPONDENCE ADDRESS:

ADDRESSEE: Cooper & Dunham LLP

US-09-371-77BB-4966/C

Sequence 4966, Application US/09371772B

Patent No. 6566127

GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Recobedo, Jaine
APPLICANT: Escobedo, Jaine
TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
CURRENT APPLICATION NUMBER: US/09/371,772B

CURRENT PILING DATE: 1995-10-26

PRIOR PILING DATE: 1995-10-26

PRIOR APPLICATION NUMBER: US 08/584,040

PRIOR APPLICATION NUMBER: US 08/584,040

NUMBER OF SEQ ID NOS: 14225

SOUTHARE: Patentin version 3.0

US-08-530-492-57
is Sequence 57, Application US/08530492
is Patent No. 5689052
is GENERAL INFORMATION:
APPLICANT: Brown, Duff A.
APPLICANT: Promm, Michael E.
APPLICANT: Sanders, Patricia R.
TITLE OF INVENTION: Synthetic DNA Sequences Having Enhanced
TITLE OF INVENTION: Expression in Monocotyledonous Plants and Method For TITLE OF INVENTION: Preparation Thereof
NUMBER OF SEQUENCES: 164
CORRESPONDENCE ADDRESS:
ADDRESSEE: Dennis R. Hoerner, Jr., Monsanto Co. BB4F
STREET: 700 Chesterfield Parkway No. 5689052th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 445

US-08-758-306-459/C

is Sequence 459, Application US/08758306

is Patent No. 5807743

GENERAL INFORMATION:
APPLICANT: Stinchcomb, Dan T.
APPLICANT: MCSWiggen, James A.
ITILE OF INVENTION: METHOD AND REAGENT FOR THE
ITILE OF INVENTION: TREATMENT OF DISEASES
ITILE OF INVENTION: ASSOCIATED WITH
ITILE OF INVENTION: INTERLEUKIN-2 RECEPTOR
ITILE OF INVENTION: GAMMA-CHAIN EXPRESSION
NUMBER OF SEQUENCES: 1379
CORRESPONDENCE ADDRESS:
ADDRESSEE: LYON & LYON
STREET: 633 Wear.
Sequence 457, Application US/08758306
Patent No. 5807743
GENERAL INFORMATION:
APPLICANT: Stinchcomb, Dan T.
APPLICANT: Stinchcomb, Dan T.
APPLICANT: McSwiggen, James A.
TITLE OF INVENTION: TREATHEN OF DISEASES
TITLE OF INVENTION: TREATHEN OF DISEASES
TITLE OF INVENTION: INTERLEUKIN-2 RECEPTOR
TITLE OF INVENTION: AMAGENATED WITH
TITLE OF INVENTION: GAMMA-CHAIN EXPRESSION
NUMBER OF SEQUENCES: 1379
CORRESPONDENCE ADDRESS:
ADDRESSE: Lyon & Lyon
STREET: 613 West Pifth Street
STREET: Suite 4700
CITY: LOS Angeles
COMMENT OF ALIFORNIA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        COUNTRY: U.S.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 447

US-08-758-306-811/c

i Sequence 811, Application US/08758306

i Patent No. 5807743

i GENERAL INFORMATION:

APPLICANT: Stinchoomb, Dan T.

APPLICANT: McSwiggen, James A.

ITILE OF INVENTION: METHOD AND REAGENT FOR THE

ITILE OF INVENTION: TREATMENT FOR DISEASES

ITILE OF INVENTION: ASSOCIATED WITH

ITILE OF INVENTION: INTERLEUKIN-2 RECEPTOR

ITILE OF INVENTION: GAMMA-CHAIN EXPRESSION

INVERSE OF SEQUENCES: 1379

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 485
US-09-371-772B-1764/C
Sequence 1764, Application US/09371772B
Patent No. 6566127
GENERAL INFORMATION:
APPLICANT: Pavoc, Pam
APPLICANT: Pavoc, Pam
APPLICANT: Rabozyme Pharmaceuticals, Inc.
APPLICANT: Rabozyme Pavoc, Dan
APPLICANT: Rabozyme Pavoc, Dan
APPLICANT: Escobedo, Jaine
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Pactor Receptor
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Pactor Receptor
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Pactor Receptor
FILE REPERENCE: MBHB00, 876-J (237/198)
CURRENT APPLICATION NUMBER: US/09/371,772B

Sequence 23, Application US/08815770
Patent No. 5801154
GENERAL INPORMATION:
GENERAL INPORMATION:
APPLICANT: Edgardo Baracchini, Jr., C. Frank Bennett
APPLICANT: and Nicholas M. Dean
TITLE OF INVENTION: Oligonucleotide Modulation of Multidrug
TITLE OF INVENTION: Resistance-Associated Protein
NUMBER OF SEQUENCES: 28
CORRESPONDENCE ADDRESS:
ADDRESSEE: Law Offices of Jane Massey Licata
STREET: 210 Lake Drive East, Suite 201

Patent No. 6566127

GENERAL INFORMATION:

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Ribozyme Dan

APPLICANT: Stinchoomb, Dan

APPLICANT: Scobedo, Jaine

TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

TITLE OF INVENTION NUMBER: US 60/005,974

PRIOR FILING DATE: 1995-10-26

PRIOR FILING DATE: 1995-01-08

NUMBER OF SEQ ID NOS: 14225

SOFTWARE: Patentin Version 3.0

LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..
